

Personally, I do not agree to RVSM rule. recently, we have seen one mid-air collision that happened about 2 weeks ago, between Russian air and German airplane. And several month ago, two japan airplanes almost hit each other by 10 meters. Lucklily, no one was injured. Mid-air collision does not happen frequently, but once it happens, it will impact very serious. If the airspace gets smaller, the possibility of the accident will be increased. Although the airplanes are installed by TACS II.

It takes much time and money to install TCAS II. Many small airlines and small chaters might be out of business. this is not just install car stereo in your car. TACS is very very expensive system. Many small companies cannot be afford to install TCAS. It will affect to the aviation industry. After September 11 many people ,who are in aviation industry, lost their job. If RVSM pass as a rule, another many people lose their job, unless the goverment does not support to small airline or chater.
